AKRAPOVIC COMPLETE RACING EXHAUST

*cod. 2S000556*

*EVO 1 - CARBON*

Complete Akrapovic racing exhaust system for track use made entirely from titanium with oval muffler in carbon. The cylinder head mating flanges are machined from solid billet aluminium while the silencer mounting brackets are in carbon fibre. The whole system weighs less than 5 kg and delivers a healthy increase in torque above 4,500 rpm, which is particularly notable from 4,500 to 8,000 rpm, significantly improving acceleration out of turns. Includes dedicated ECU mapping (with three R/S/T settings) to exploit the full potential of the exhaust. Unlike the standard ECU mapping, all three R, S and T maps deliver unlimited power - the S ECU mapping offers smoother response, whereas the R mapping limits torque in the first three gears. For track use only.
