

The swingarm pivot recess on the Tuono is at approximately the correct height but the opening is shaped differently so the stepped back of the LOTT348 will not sit flush if you attempt to install.

See images below:

RSV4 opening (essentially a perfect oval)

Tuono V4 opening (irregular oval)

The relative depth of the pivot in that recess also varies slightly, so even if you grind the step off the back of the LOTT348, they would still sit proud of the frame by a mm or two.
